

【左栏 · 英文原稿】

Good morning, everyone. Today's **lecture** is about wildlife in **Australia**.

Australia is famous for its unusual **animals**. The **kangaroo** and the **koala** are the most well-known examples.

Kangaroos can jump very fast, and they use their strong tails for balance.

Koalas sleep for up to twenty hours a day, because their **diet** of leaves gives them little **energy**.

Not all **Australian animals** are **mammals**. The **emu** is a large bird that cannot fly, and the platypus lays **eggs** like a bird.

On the **coast**, you can often see dolphins playing near the **beach**, and sometimes whales **pass** by during their **migration**.

Unfortunately, many of these **species** are in danger. **Pollution** and climate change are the main threats.

Scientists believe that **conservation** areas can help protect these **animals** for the future.

Let me give you a few more examples from around the world. In **Africa**, the **lion** hunts with its family **group**, and the **elephant** is the largest land **beast**.

On the **farm**, we find **cattle**, **sheep**, **goats** and horses, and their young are called a **calf**, a **lamb**, a kid and a foal.

Poultry such as **chickens** are kept for their **eggs**, while a **donkey** or a **pony may** be used for carrying goods.

In the sea, the **shark**, the **dolphin** and the **whale** swim together, and **shellfish** grow along the rocky **coast**.

A **bee** collects honey from flowers, a **butterfly** lands on **petals**, and a **dragonfly** flies above the pond at night, like a small **firefly**.

Some **animals** are in danger: the **polar bear**, the **wolf**, the **fox**, the **puma** and the **tiger** all need protection.

A **crocodile** lives near rivers, and a **tortoise** carries its home on its back, while a frog is an **amphibian**.

Baby **animals** have **special** names: a bear has a **cub**, a dog has a **puppy**, and a bird has **chicks**.

Breeding animals on **special** farms helps keep the **population** strong, and **breeding birds** are protected during the **season**.

An **ostrich** cannot fly, but it can run very fast, and a **falcon** is famous for its **speed** in the sky.

Let me say a few more words about animal protection. A **national park** is a safe place for wild **animals**, and the **government** makes rules to protect them.

In the past, some **animals** were hunted for their fur, but now hunting is not allowed in most countries.

Scientists study **animals** in their **natural** environment, and a zoo helps people see rare **species** safely.

【右栏 · 中文参考译文】

听力判断题 / 问答：

[T/F] Kangaroos use their tails for balance.

[T/F] Koalas eat leaves that give them lots of **energy**.

[T/F] The **emu** is a mammal that cannot fly.

[Q] What is the main danger to these **species**?

[Q] What can help protect the **animals**?

答案：
1.TRUE 2.FALSE 3.FALSE 4.pollution and climate change 5.conservation areas

大家早上好。今天的讲座是关于澳大利亚的野生动物。

澳大利亚以独特的动物闻名。袋鼠和考拉是最著名的代表。

袋鼠能跳得非常快，它们用强壮的尾巴保持平衡。

考拉每天睡眠长达二十小时，因为它们的树叶饮食给它们提供很少能量。

并非所有澳大利亚动物都是哺乳动物。鸸鹋是一种不会飞的大鸟，鸭嘴兽像鸟一样产卵。

在海岸边，你经常可以看到海豚在海滩附近嬉戏，有时鲸鱼在迁徙途中经过。

不幸的是，这些物种中有许多正面临危险。污染和气候变化是主要威胁。

科学家认为，保护区可以帮助保护这些动物，造福未来。

让我再举几个世界各地的例子。在非洲，狮子与家族一起捕猎，大象是最大的陆地动物。

在农场里，我们有牛、羊、山羊和马，它们的幼崽分别叫 calf、lamb、kid 和 foal。

鸡等家禽是为了鸡蛋而饲养的，而驴或小马可能用来驮运货物。

在海里，鲨鱼、海豚和鲸鱼一起游动，贝类沿着岩石海岸生长。

蜜蜂从花朵上采蜜，蝴蝶落在花瓣上，蜻蜓夜间在池塘上方飞行，像一只小小的萤火虫。

有些动物濒临危险：北极熊、狼、狐狸、美洲狮和老虎都需要保护。

鳄鱼生活在河流附近，陆龟把家背在背上，而青蛙是两栖动物。

动物幼崽有特殊的名字：熊有 cub，狗有 puppy，鸟有 chicks。

在专门的养殖场繁殖动物有助于保持种群强壮，繁殖期的鸟类在季节内受到保护。

鸸鹋不会飞，但能跑得非常快，而猎鹰以空中速度闻名。

让我再说几句关于动物保护的话。国家公园是野生动物的安全之地，政府制定规则保护它们。

过去，有些动物因皮毛被捕猎，但现在大多数国家不允许捕猎。

科学家在自然环境中研究动物，动物园帮助人们安全地看到稀有物种。

宠物每天需要照顾，兽医检查它的健康，生病时给它药。

有些动物群体生活、互相帮助，而另一些独居并在夜间捕猎。

农场动物给我们食物和其他有用的东西，我们必须善待它们。

冬天有些动物长时间睡觉，夏天它们寻找水和阴凉。

关于动物的另一个想法。每个生物都需要食物和水，昆虫是自然界的一部分。

动物园的喂食时间印在大门上，海洋生物在水族馆中研究。

有些动物有特殊的嗅觉或听觉能力，它们的行为随季节变化。
